

# ComplyPak

## ComplyPak ... Executive Summary

- Unit Dose Package that Promotes Patient Compliance
- Built with PharmaGuard for Sustainability and Child-Resistance
- Dispenses Medication Using a Three-Step, Senior-Friendly Process
- Fully Customizable with Branding and Drug Information
- Accommodates a Wide Range of Blister Cavities

## Blister Compliance. Bottle Convenience.

An innovative unit dose packaging solution for pharmaceuticals, ComplyPak™ promotes patient compliance by delivering a blister regimen with the convenience of an amber medication bottle. The combination package is primarily paper-based, incorporates a child-resistant cap on the thermal-formed blister card, and requires a three-step, senior-friendly process – push, align, remove – to dispense dosages. Tablets are pressed through the foil backing and expelled into a cavity that can be accessed only by aligning the arrows of the child-resistant cap for release. ComplyPak's integrated blister card is customizable by pharmaceutical companies to accommodate most prescription medications and can house a wide range of blister cavities.

ComplyPak replaces amber medication bottles and nondescript blister packs that require the patient to keep track of their dosages and remaining quantities. The paperboard-based ComplyPak is fully brandable, enabling pharmaceutical companies to brand the package and print dosage numbers, dates or other instructions used to serve as a reminder for patients.

## ComplyPak. Protected with the Power of PharmaGuard

Based on Colbert's award-winning, patented BlisterGuard® security package, PharmaGuard™ is a tear, bite and moisture resistant solution designed to help pharmaceutical manufacturers achieve their F rating goals. Offering enhanced packaging security, PharmaGuard combines Everest® Safe-Pak™ solid bleached sulfate paperboard from International Paper with multilayer Valéron® Strength Film. PharmaGuard can also be recycled in programs that accept mixed material packaging, meeting the sustainable packaging requirements of drug manufacturers and pharmacies.
